

DiMe Seal recognized by CMS as an Evaluation Pathway Supporting Medicare App Library, helping expand access to apps and digital tools

Boston, MA, February 25, 2026 – The [DiMe Seal](#) has been recognized by the Centers for Medicare & Medicaid Services (CMS) as a pathway for digital health applications seeking inclusion in the Medicare App Library — a CMS resource that highlights certain private-sector, user-facing applications that meet defined participation criteria.

The Medicare App Library is intended to serve as a foundational resource providing Medicare beneficiaries with information about applications that may support access to their health information and related digital tools.

By recognizing the DiMe Seal, CMS is identifying an option that may help demonstrate that applications accessible to Medicare beneficiaries meet defined criteria for evidence, privacy and security, usability, and interoperability.

“For companies serving patients and caregivers at scale, trust must be earned and demonstrated,” said Priyanka Agarwal, CEO of HealthEx, a CMS Health Technology Ecosystem pledge partner and recipient of the DiMe Seal. “The DiMe Seal provides a rigorous and efficient framework to validate that digital health products meet clear standards for evidence, privacy, and usability. We are proud to have earned the Seal and look forward to participating in the Medicare App Library, which represents a meaningful opportunity to responsibly expand access to connected care for Medicare beneficiaries nationwide.”

The DiMe Seal: Establishing a Structured Benchmark of Quality and Trustworthiness

The DiMe Seal is an evidence-based quality framework developed through a comprehensive review of more than 1,000 scientific articles, 47 regulatory guidances, 112 standards and quality programs, and input from over 150 cross-sector experts. The Seal evaluates digital health software across core domains of evidence, privacy and security, and usability.

“By recognizing the DiMe Seal as a defined quality benchmark that may support eligibility into the Medicare App Library, CMS is strengthening trust in digital health products offered to Medicare beneficiaries,” said Jennifer Goldsack, CEO of the Digital Medicine Society. “This partnership establishes a transparent and efficient pathway for innovation that protects beneficiaries while enabling developers to engage a national Medicare audience.”

Apps and Digital tools listed in the Library may be visible to Medicare beneficiaries through the Library and related CMS communications channels. The DiMe Seal evaluation is conducted through a developer-friendly, platform-based process designed to provide clarity and efficiency without compromising quality and trustworthiness.

CMS has indicated the Medicare App Library is expected to launch in the coming weeks. Go [here](#) to explore the DiMe Seal and initiate your product’s inclusion in the Medicare App Library.

About the DiMe Seal: The DiMe Seal is an independent, evidence-based framework for evaluating the quality and trustworthiness of digital health software products. Developed by the Digital Medicine Society through a comprehensive review of scientific literature, regulatory guidance, and cross-sector expertise, the Seal assesses products across core domains of evidence, privacy and security, and usability. It provides a scalable, transparent mechanism to benchmark digital health applications and accelerate the adoption of trustworthy technologies across the healthcare ecosystem.
